# DIY CLOCK

**e** EASY

## WHAT YOU'LL NEED

- 1 x Craftsmart Craft Round Plywood Clock Base
- Craftsmart clock making kit, black. This kit includes the hands, numbers & clock shaft.
- Paper
- Double sided tape
- Scissors
- Pencil

## INSTRUCTIONS

**Step 1** – Decide on which paper background you would like for your clock design. The paper can be any colour or texture you like. Trace around clock base with a pencil onto paper and cut out with scissors. We decided to cut different pieces of paper and layer them together to create a collage look.

**Step 2** – Use double sided tape to stick down your paper onto the clock face. Ensure that all pieces of paper are stuck down well so they don't stick up and affect the clock mechanism.

**Step 3** – Following the directions on the packaging assemble the clock pieces together on either side of the clock base.

**Step 4** – Stick the numbers around clock face to finish!

**Step 4** – Hang your new clock project.
